“.....find it a very good reference material for any foreigner planning to start a business in Thailand. I would, also, recommend this book as well to businessmen or professionals who are staying in Thailand who need a good reference book on taxes in Thailand. It is simple to read and well organized.”

“Doing business in Thailand is very difficult for the “farang” or foreigner. There are many pitfalls to be careful of including labour, customs, shareholders and others. Finding good advice on how to address these issues is also very difficult, as it is more often who you know, or what your position in society is that’s important more than the written document, contract, law or regulation.

Even Farangs that have been in Thailand for many years get caught out by customers, suppliers and employees on a regular basis.

This problem is what makes this book special.

A simple to read and understand guide to the taxation system is vitally important to help the Farang executive know and understand the many forms and requirements (most of which are prepared and presented in Thai) that are a necessary part of business here. It is long overdue and not something that the Thai government would look to publish anytime soon.

NARIT and Associates have had a long history of connections and experience with the Australian Chamber of Commerce in Thailand, and indeed many of the expat communities. The many years of hands on experience coupled with a solid British Education makes his advice second to none in this area.

This book is a must for any Farang wanting to start a business in Thailand or even for the long term expatriate manager/owner who is looking to ensure maximum advantages are gained while still complying with the letter and spirit of Thai tax law.”
